

# How To Setup CampBooking Management Application Guide

1. Extract the zip file.
2. Download and Install [Node](#). Download the **LTS** version.
3. Download and Install [VSCode](#) and Visual Studio.

## In Visual Studio(Back End)

Open the Camp Booking.sln from the Extracted File

After that follow the below steps :

- Open Packet Manager Console from Tools Tab > Nuget Package Manager>Packet Manager Console.
- Run the following command on console - **Update-Package -reinstall** that will installed all the dependencies require to run solution.
- Now run the IIS Express.
- Note Your Local host port number

After this your backend will start to work.

## In VSCode (Front-End)

Open UI folder from Extracted File In VS Code

After that follow, the below mentioned commands

- i. Open terminal and try following command
  - ii. `node -v` //should print the node version
  - iii. `npm -v` //should print the npm version
  - iv. `npm install -g @angular/cli`
  - v. `npm install`
  - vi. now go to config.ts by following path `src > app > config.ts`.
  - vii. There exists a port Number variable with value "60628" replace it by your Backend port number.
  - viii. Now run **npm start** on terminal.
- After this your UI will be started on <http://localhost:4200/home>
